New isolated transcriptional intermediary factor-2 - useful in assays for drugs which are capable of enhancing or inhibiting anculear receptor-mediated pathways

Tuclear receptor-mediated pathways

Claim 1; Fig 1A·B; 119pp; Boglish.

This cDNA clone codes for a novel nuclear receptor transcriptional mediator (see W47532) designated transcriptional intermediary factor-2 (TIF2).

This cDNA clone codes for a novel nuclear receptor transcriptional intermediary factor-2 (TIF2).

This cDNA clone codes for a novel nuclear receptor in the ligand binding domains (LBD) of several nuclear receptors (NR) in an agonist- and entended of the series of t
                                                                                                                                                                                                                                                                                                                                                                                                                       4236 TIGGGACAGAIGGCCAIGACCCCCAIGCCCAIGICIGGCAIGCCCAIGGGCCCCGAICAG 4295
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        4296 AAATACTGCTGACATCTCCCTAGTGGGAC-----TGACTGTACAGATGACACTGCACA 4348

This sequence represents a polynucleotide of the invention, and encodes a secreted protein. It was isolated from a human adult testis cDNA library, and is designated clone AJI. The DNA sequences and encoded polypeptides can be used as nutritional sources or supplements, or may shibit e.g. cytokine and cell proliferation/differentiation activity, immune stimilating or suppressing activity, haematopoiesis regulating activity, receptor/ligand activity, atti-inflammatory activity, activity, chemostatic/chemokinetic activity, cadherin/thmour invasion suppressor activity, tissue growth activity, tumour inhibition activity or other activities.

T. claim 1; Page 487, 618pp; English.
The polynucleotide, which is a secreted EST, and the encoded protein
The polynucleotide, which is a secreted EST, and the encoded protein
The polynucleotide, which biological activities which would make
The predicted to have useful biological activities which would make
The me suitable for treating, preventing or ameliorating medical
Conditions in humans and animals, although no supporting data is
Given. Suggested activities include nutritional activity, immune
Atimulating or suppressing activity, haematopoiesis regulating
activity, tissue growth activity, activity, infinition
Coemic invasion suppressor activity, cancerivity, cadherin'thoughtion
Cotivity. The polynucleotide may also be useful for gene therapy.

Claim 18; Page 24; 38pp; English.

Char gequence encodes an epitope-tagged TATA-box binding protein (TBP)

Char is expressed by the transgenic non-human animals of the invention.

Characterise higher-order transcription complexes (from different tissue and cell types, optionally at different developmental stages). It is also used to identify new and/or specific TBP associated factors (TAFS, e.g. transcription factors, activators or inhibitors) and TAF-interaction factors, and to raise antibodies against TBP. The TAFS may be useful for regulating gene expression, e.g. disages-related genes, so are potential pharmaceuticals, also for identifying human analogues for use in drug screening. The antibodies are used for affinity purification of TBP and its complexes. TBP can isolate transcription complexes from a wide converted of different tissues and cells (contrast known methods that are limited to isolation from a particular cell type).

New polynucleotides encoding human secreted proteins - derived from
e.g. human blood, Kidney, foetal lung, placenta, testes, brain,
F. cvary, pituitary, retina and colon cDNA libraries
F. Craim 1: Page 176: 633pp: English.

This sequence represents an expressed sequence tag (EST), and is a
colynucleotide of the invention. The polynucleotides of the invention are
colynucleotide of the invention. The polynucleotides of the invention are
colynucleotide of the invention. The polynucleotides of the invention
colon large sequences and proteins encoded by them are predicted to
colon section blological activities which would make them suitable for
colon activities allowed activity, immune stimulating or suppressing activity,
colon nutritional activity, immune stimulating or suppressing activity,
cactivity, cadherin/tumour invasion suppressor activity, tumour inhibition
colon thromobolytic activity, receptoryligand activity, the EST sequences are also stated to be useful for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

This sequence encodes an epitope-tagged TATA-box binding protein (TBP)

This sequence encodes an epitope-tagged TATA-box binding protein (TBP)

that is expressed by the transgenic non-human animals of the invention.

Characterise higher-order transcription complexes (from different tissue and cell types, optionally at different developmental stages). It is also used to identify new and/or specific TBP associated factors (TAFs, e.g. transcription factors, activators or inhibitors) and TAF-interaction factors, and to raise antibodies against TBP. The TAFs may be useful for factors, also for identifying human analogues for use in drug screening. The antibodies are used for affinity purification of TBP and isolate transcription complexes from a wide its complexes. TBP can isolate transcription complexes from a wide immited to isolation from a particular cell type).

WPI; 95-061001/08.

New autosomal dominant spinocerebellar ataxia type I nucleic acid diagnosis of a SCA1 disorder.

Lused to develop prods. for detection or presymptomatic diagnosis of a SCA1 disorder.

Disclosure; Fig 2; 111pp; English.

094831-084835 show the CAG repeat regions of five individuals affected with spinocerebellar ataxia type I (SCA 1). It is within CAG repeat region (Q84804) that the mutations responsible for SCA I occur. The full nucleic acid (Q84793) and its protein product (R71111) can be used to develop products, for the presymptomatic detection of a SCA I disporder.

084811-084815 show the CAG repeat regions of five individuals
affected with spinocerebellar ataxia type 1 (SCA 1). It is within
CAG repeat region (084804) that the mutations responsible for
SCA 1 occur. The full nucleic acid (084793) and its protein product
(R71111) can be used to develop products, for the presymptomatic
detection of a SCA 1 disorder. 73 A 80 C; 77 G; 4 T;

Mean 39.485; Variance 214.637; scale 0.184 tatistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                 This sequence is secreted protein, encoded by a polynucleotide of the invention. The DNA was isolated from a human adult testis cDNA library, and is designated clone AJI_1. The DNA sequences and encoded polypeptides can be used as nutritional sources or supplements, or may exhibit e.g. cytokine and cell proliferation/differentiation activity, inceptor/ligand activity, anti-inflammatory activity, activity, anti-inflammatory activity, activity, chemostatic/chemokinetic activity, chamour invasion suppressor activity, tissue growth activity, tumour inhibition activity or other activity, tissue growth activity, sequence 147 AA,

This is the amino acid sequence of human CLOCK protein, an integral component of the circadian clock that serves to regulate various
an SRC-1 coding region for use in gene therapy. Transcription of target gene can be decreased by providing a nucleic acid encoding dominant-negative inhibitor of a SRC-1 polypeptide in a cell containing the target gene (also claimed).

Claim 41-48; Claim 4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human Ah receptor protein.
Mouse Ah receptor; drug; carcinogen; toxic agent; probe; human; bioassay;
C57BL/6J mouse liver; environmental pollutant; recombinant organism;
aspects of circadian rhymth, including intrinsic circadian period and the persistence of circadian rhythmicity. The sequence was deduced from the isolated clock gene (see Vol450). Mouse CLOCK (see W79529) is also claimed. CLOCK is a member of the bHLH-PAS domain family of proteins, and thus likely interacts directly with DNA.

It has Gln., Pro. and Ser-rich C-terminal regions characteristic of activation domain transcription factors. The invention provides isolated and purified CLOCK polypeptides, polynucleotides, vectors in host cells. The polynucleotides, polynucleotides, vectors is and host cells. The polynucleotides or polypeptides can be used to treat disorders of altered or disrupted circadian rhythms e.g. treat disorders altered or disrupted circadian rhythms e.g. such as mood state, stress, neurological disorders, to regulate diet and food intake aspecially for diababets, to treat candowascular, respiratory, liver or endocrine disorders, and for diagnosis and treatment of abnormal cell division such as cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  generate recombinant organisms useful as blomonitors for environmental pollutants.

New genetically engineered yeast and mammalian cells - contain the Ah receptor gene and a reporter gene, used for detecting Ah receptor gene and a reporter gene, used for detecting Ah receptor geneits, particularly environmental pollutants

Claim 1: Fig 6: 47pp; English.

This sequence represents the human Ah receptor molecule. The cDNA encoding this protein may be used to transform a viable yeast cell, which may also be transformed with a plasmid expressing an Ah receptor nuclear translocator, a dioxin responsive element and a reporter gene. The reporter gene detects the activation of the Ah receptor upon the binding of agonists to the Ah receptor. The transformed cells can be used to detect and soil or in tissue samples. They can be used for detecting and monitoring environmental pollutants such as dioxin.

This is the amino acidy degrees of mouse CLOCK protein, an integral component of the circadian clock that serves to regulate various aspects of circadian rhymth, including intrinsic circadian period and the persistence of circadian rhythmicity. The sequence was accounted from the isolated Clock gene (see V61401). Human CLOCK (see W79533) is also claimed. CLOCK is a member of the billin-PsA domain family of proteins, and thus likely interacts directly with DNA. It has Gln., Pro- and Ser-rich C-terminal regions characteristic of activation domain transcription factors. The invention provides isolated and purified CLOCK polypeptides, polynucleotides, vectors and host cells. The polynucleotides or polypeptides can be used to treat disorders of altered or disrupted circadian rhythms e.g. isolated and purified GLOCK polypeptides. Polynucleotides can be used to treat disorders of altered or disrupted circadian rhythms e.g. jet-lag, seasonal affective disorder, sleep-wake cycle disorders cuch as mood state, stress, neurological disorders, to regulate circadian challents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -rqd--wk-ptflsneeftqlmlealdgfflaimtdgsijyvsesvtsllehlpsdlvdg 152

2-NOV-1995 (first entry)
Murine Ah receptor protein.
Mouse Ah receptor; drug: carcinogen; toxic agent; probe; human; bloassay;
C57BL/6J mouse liver; environmental pollutant; recombinant organism;
                                                                                                                                                                                                         TATA-box binding protein; epitope-tagged TBP; transcription complex; TAF;
TBP associated factor; TAF-interaction factor; gene expression regulator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ä

The amino acid sequence of the murine Ah receptor protein. The Ah receptor is a soluble protein which mediates an individuals response to a variety of drugs, carcinogens and toxic agents. The gene was isolated from a mouse genomic DNA library using the probes 099603-5. These probes were determined from the N-terminal sequence of a purified Ah receptor, which was purified from C57BL/6J mouse liver. The screen isolated a clone designated cAhl containing the full length cDNA. The 1.4 kb fragment of the murine clone was used to obtain clones covering the coding sequence of the human AH receptor (099602). The Ah receptors are useful in bioassays to detect environmental pollutants. The genes can be environmental pollutants.

The gene associated with SCA2, has a tri-nucleotide (CAG) repeat region which in the expression product produces a polyglutamine sequence from Gln-166 to Gln-188. In the normal gene there are 15-25 CAG repeats but in SCA2 patients this number is increased to 35-100. Peptides encoded by nucleic acid fragments (DNA or RNA) containing sequences from the SCA2 associated hybridising with the nucleic acid fragments can be used for the investigation and diagnosis of SCA2. They can also be used for the treatment of SCA2 by antisense therapy or gene therapy.
                                                                                                                                                                                                                                                                                                                                           9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 9; Page 54-57; 93pp; English.

This polypeptide comprises a 68 kDa yeast transactivating factor,
TAF-68, that is associated with the TAFA-box binding protein.

TAF-68 that is associated from Saccharomyces creevisiae cells by
virtue of its affinity to fungal or human TATA-box binding proteins
using chromatographic procedures. It can also be recombinantly
produced in host cells utilising vectors carrying a TAF-47 nucleic
acid (see V04771). The yeast TAF complex includes 9 polypeptides
cof 180, 145 (see W33622), 116, 90 (see W33634), 68, 62, 51-54, 47
(see W33627) and 30 kDa. At least some of these are required for
transcription in vitro. TAFs are also essential for viability.

TAF-68 can be used in the discovery, design and development of
antifungal agents, e.g. for treatment of candida albicans infections
(candidaesis). It can also be used to raise diagnostically useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ::1 :::1 | : ::| | : ::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : ::::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : ::::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : :::| | : ::| | : ::| | : ::| | : ::| | : ::| | : ::| | : ::| |
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Yeast nucleic acids encoding TATA-box binding protein factors 47 and 68 - useful for developing anti-fungal agents for immunocompromised

Tor diagnosis and therapy

Claim 1: Page 29-31; 42pp; English.

This is the amino acid sequence of mouse neuronal PAS domain protein

RASI, a new member of the basic helix-loop-helix (PHILH)-PAS family

of transcription factors. A database search for expressed sequence

tags bearing sequence similarity to the PAS domain of the aryl

of transcription factors of Adatabase search for expressed sequence

tags bearing sequence similarity to the PAS domain of the aryl

of transcription factor of hybridisation probes, and clones

primers for PCR amplification of hybridisation probes, and clones

(see V41245-59) coding for human and mouse NPAS proteins (see

primers for PCR amplification of hybridisation probes, and clones

(see V41245-94) were selected from mouse brain tissue. They can be produced

tissue and Hela cells. The NPAS proteins can regulate the function

of neurological tissue such as brain tissue. They can be produced

crecombinantly from transformed host cells or purified from

mammalian cells. NPAS proteins and polypurclectides can be used in

diagnosis (e.g. genetic hybridisation screens for NPAS transcripts),

the biopharmaceutical industry (e.g. as immunogens, reagents for

sorreening chemical libraries for lead pharmacological agents).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ë

regulators, e.g. a heat shock protein.

Tequilators, e.g. a heat shock protein.

Claim 1; Columns 25-30; 23pp; English.

The present sequence represents a novel human endothelial PAS domain protein an a represent sequence represents an expension of protein and be used in a screening assay for agents that concein can be used in a screening assay for agents that modulate binding of EPAS1 to a binding target, especially a basic helix-loop-helix (BHIH)/PAS protein, a heat shock protein or hypoxia inducible factor (HFF 1 alpha) binding site. The EPAS1 protein is inducible factor (HFF 1 alpha) binding site. The EPAS1 protein is concusted with the binding target and a test agent and the effect of the test agent on the binding affinity of the protein for the target is determined. The proteins may be produced recombinantly from transformed constitution screens for EPAS1 transcripts), therapy (e.g. gene therapy concurred to meanmalian cells. The proteins may be used in diagnosis (e.g. gene therapy concurred to meanmal the effect of the proteins are sensitive in the biopharmaceutical industry (e.g. as immunogens, reagents for industry for screening charactors or other transcriptional regulators, reagents for screening chemical libraries for lead pharmacological agents, etc.).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human endothelial PAS domain protein 1 (EPAS1).

Spinocerebellar ataxia SCA2 protein A.
Spinocerebellar ataxia SCA2 protein A.
Monoclonal antibody: neurodegenerative disease; polyglutamine; TBP;
repeat region; affinity; TATA binding protein; Kennedy disease;
transcription initiation factor; lymphoblastic cell line; schizophrenia;
Huntington's disease; dominant autosomal spinocerebellar ataxia;
X-linked spino-bulbular muscular atrophy; familial spastic paraplegia;
manic depressive psychosis.
                                                                                Gaps 14;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1..80

This MAD is already known for its affinity to the TATA binding protein (TBP) transcription initiation factor, especially at the amino acid sequence LEEQORQOQQQ found at the N-terminus of TBP. MAD IC2 has been shown to have a high affinity for polyglutamine repeats with a proportional affinity to the number of glutamine repeats. This affinity has been used to identify genes encoding proteins containing long polyglutamine repeats which are implicated in neurodegenerative diseases. A screen of an expression stibrary, generated from a lymphoblastic cell line from a patient

cc suffering from spinocerebellar ataxia (SCA), with WAb 1C2 isolated 6

new sequences (178906-178911) encoding polyglutamine repeats. MAb 1C2

cc also isolated the complete SCA2 gene in clone DAN1 which appears to

cc contain 2 open reading frames (ORF), the second of which may be generated

cc contain 2 open reading frames (ORF), the second of which may be generated

cc contain a 22 amino acid polyglutamine region. Normal SCA2 proteins

cc contain 17-29 glutamines in the repeat whereas the mutant sequence

from patients with SCA contains at least 30, preferably 37-50 repeats.

cc from patients with SCA contains at least 30, preferably 37-50 repeats.

cc from patients with SCA contains at least 10, preferably 37-50 repeats.

cc from patients with scandard from the repeat whereas the mutant sequence

from patients with SCA contains at least 30, preferably 37-50 repeats.

cc from patients with scandard from nucleic acids encoding it are

specifically used to treat Huntington's disease, SCA types 1-5 or 7,

x-linked spino-bulbular muscular atrophy (Rennedy disease),

dentarorubral-pallidolusial atrophy, dominant autosomal spinocerebellar

cc ataxia familial spastic paraplegia, bipolar affective disorder, manic

cc ataxia familial spastic paraplegia, bipolar affective disorder, manic

Patent No. 5874241
GENERAL INFORMATION:
APPLICANT: Takahashi, Joseph S
APPLICANT: Turek, Fred W
APPLICANT: Turek, Fred W
TITLE OF INVENTION: Clock Gene and Gene Product
NUMBER OF SEQUENCES: 53
CORRESPONDENCE ADDRESSS:
ADDRESSEE: Dressler, Rockey, Milnamow & Katz
STREET: Two Prudential Plaza, Suite 4700

Patent No. 5695963
GENERAL INFORMATION:
APPLICANT: RUSSell, David W.
APPLICANT: Tien, Hu!
TITLE OF INVENTION: Endothelial PAS Domain Protein
NUMBER OF SEQUENCES: 7
CORRESPONDENCE ADDRESS:
ADDRESSES: SCIENCE & TECHNOLOGY LAW GROUP
STREET: 268 BUSH STREET, SUITE 3200
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 209; DB 2; Length 594; Pred. No. 7.13e-06; 35; Mismatches 50; Indels
                                                                                             COMPUTE: FRADABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: ENDAPY disk
COMPUTER: ENDAPY disk
COMPUTER: TEM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: D3.008/785,310A
FILING DATE: 21-JAN-1997
CLASSIFICATION: 536
ATTORNEY/AGENT INFORMATION:
NAME: OSMAN, RICHARD A
REFERENCE/DOCKET NUMBER: 36,627
REFERENCE/DOCKET NUMBER: 36,627
REFERENCE/DOCKET NUMBER: 36,627
REFERENCE/DOCKET NUMBER: 34,434
TELECOMMUNICATION INFORMATION:
TELECOMMUNICATION INFORMATION:
TELECOMMUNICATION OF 6:
SEQUENCE CHARACTERISTICS:
LENGTH: 594 antino acids
TYPE: amino acids
TYPE: amino acids
TYPE: ATRADEDNESS: single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      870 AA

on Mar 21, 1999 this sequence version replaced gi:4375895.
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with

This sequence is the entire insert of clone 1049G16. The true left end of clone dJ237J2 is at 54555 in this sequence. This sequence has been finished according to sequence map criteria as follows attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                             This sequence was generated from part of bacterial clone contigs which sequence are 20, constructed by the Sanger Centre Chromosome Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr20
1049G16 is from the library RPCI5 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For further details see http://dopac.med.buffalo.edu/ VECTOR: pCYPAC2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 3333, .3737
